

FROST

Fighter

The New IDH500QR-ENV featuring combustion optimization.

The new IDH500QR-ENV introduces Frost Fighter's brand new combustion optimization technology. This heater will automatically adjust burner air flow to give you optimal combustion performance at all elevations, air densities and temperatures. Combustion is continually adjusted to provide better light off's at low temperatures and high altitudes while reducing nuisance shutdowns due to varying environmental conditions.

Built to provide your fleet with the flexibility of one heater that can supply reliable heat at sea level to the mountains above and at any temperature without the need for any modifications.

Available on the IDH500QR-ENV and the IDH500ENV self contained trailer.
