Fighter

The IHS700H is now available with an optional 7.5 horsepower motor that makes one of the most popular large heaters on the job site even more powerful!

The IHS700H will produce over 50% more airflow than the standard IHS700P supplying up to 8000 CFM vs. 4600 CFM with the standard unit. Maximum static pressure increases to 6.0" w.c.

The IHS700H also features a selectable 3 speed fan control allowing you to customize the airflow and the amount of heat being delivered to your job-site.

The outstanding performance provided by the more powerful motor in conjunction with the fan controller allows the IHS700H to supply higher air volumes and air pressures while still retaining all the original performance characteristics of the IHS700P when needed.
